Introduction

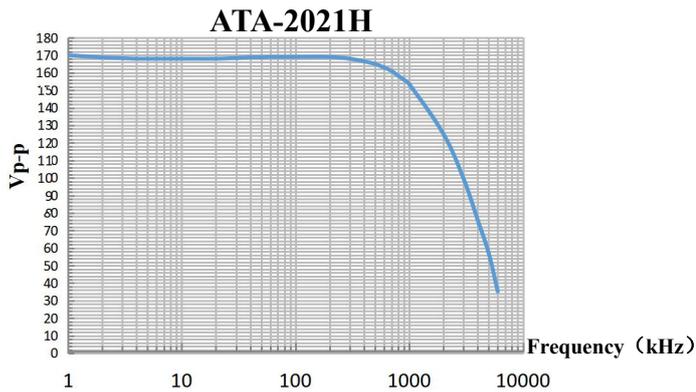

ATA-2000 series is an ideal high voltage amplifier that can amplify AC and DC signals. The maximum differential output is 1600 Vp-p (± 800 Vp) high voltage, which can drive high-voltage load. The voltage gain can be adjusted by numerical control, and the common settings can be saved by one key. At the same time, the output of dual channel high-voltage amplifier can also be adjusted synchronously, which can be used with mainstream signal generator to realize perfect signal amplification.
