GDYD-1020D AC Hipot Test Set

20kVA/100kVAC(100kVAC,200mA)

(Manual Control Unit+Gas type testing transformer) Pictures only for reference first.

Application

AC hi-pot testing is the effective and direct way to test insulation strength for electrical equipment, apparatus, or machines. It checks dangerous flaws which assure electrical equipment continuous working.

Typical applications include testing of transformers, switchgear, cables, capacitors, aerial motors platforms, hot sticks bucket bricks, vacuum bottles and other related equipment like vacuum interrupters, blankets, ropes, gloves, hydraulics hose, instruments transformers generators.

Features

- Digital display panel mounted controls & indicators with easy-to-read legend.
- Monitoring high voltage side voltage, low voltage side current and indicator of zero, power, working start, timing.
- Over-current protection, zero-starting protection, sound, and light alarm.
- Continuously variable output from zero to full voltage.
- Adjustable over current protection, with trip levels variable from 10 to 110%.
- With new type time relay, time range is wider (1S ~ 99H).
- Using the latest current relay, more accurate and reliable.
- Light weight, small size, easy to move.
