

## • AS8930 External Sampling Pump

**Product No.:** AS8930

**Introduction:** External sampling pump is an accessory specifically developed for AS89 series gas detectors. It provides higher sensitivity for the detector effectively.

### FEATURES

External sampling pump does not operate independently, it needs to work with the voltage from the AS89 series gas detectors. Therefore, the sampling pump must be connected to the detector with 2 screw.

1. dock the pump with the instrument properly
2. use a screwdriver to tighten the screws and fix them firm
3. the pump works after the instrument is turned on

### SPECIFICATIONS

Velocity of Air-flow	0.5SCFH (0.25LPM)
Operating voltage range	DC 2.2V-3.2V
Working current	<280mA
Nozzle diameter	2.5mm
Minimum operating voltage	2.2V
Noise	<75 dB
Dimensions	100.8*62.3*50mm
