Chapter

1

General Information

This chapter has general information about warranty, cautions, specifications and key features of a shield box.

1.1 WARRANTY

TESCOM guarantees that this product will be free from defects in materials and workmanship for a period of six months from the date of shipment. During the warranty period, TESCOM will, at its discretion, either repair or replace defective products.

For the warranty service, customer must notify TESCOM of the defect before the expiration of the warranty period and make suitable arrangements for the performance of service. Customer shall be responsible for packaging and shipping the defective product to TESCOM or a service center designated by TESCOM. Customer shall pay for shipping charges as well as any other charges incurred outside of Korea. TESCOM shall pay shipping charge to return the product to customer.

This warranty shall not apply to consumable parts and any failure or damage caused by improper use or unauthorized service. In such cases, TESCOM may refuse to furnish service under the warranty.

LIMITATION OF WARRANTY

The foregoing warranty shall not apply to defects resulting from improper or inadequate maintenance by customer, Customer-supplied software or interfacing, unauthorized modification or misuse, accident or abnormal conditions of operations.

TESCOM responsibility to repair or replace defective products is the sole and exclusive remedy provided to the customer for breach of this warranty. TESCOM will not be liable for any indirect, special, incidental, or consequential damages, despite any advance notice of the possibility of such damages.

1.2 Safety Considerations

Review the following safety precautions to avoid injury and prevent damage to this product or any product connected to it.

Do Not Disassemble any part except replaceable parts

Do Not Operate in Wet/Damp Conditions

To avoid injury or fire hazard, do not operate this product in wet or damp conditions.

Do Not Operate in Explosive Atmosphere

To avoid injury or fire hazard, do not operate this product in an explosive atmosphere.

Provided Proper Ventilation

To prevent product overheating, provide proper ventilation.

Do Not Operate With Suspected Failures

If there is damage to this product, have it inspected by qualified service personnel

Environmental Conditions

Refrain from using this equipment in a place subject to much vibration, direct sunlight, and where the

surface is not level. Also, use it where the temperature is between 0 °C to 50 °C and relative humidity is less than 85 %.

1.3 Safety Symbols and Terms

Terms in this manual:

WARNING: Identifies conditions or practices that could result in injury or loss of life.

CAUTION: Identifies conditions or practices that could result in damage to the product or other property.

Terms on the product:

DANGER: Indicates an injury hazard immediately accessible as you read the marking.

WARNING: Indicates an injury hazard not immediately accessible as you read the marking.

CAUTION: Indicates a hazard to property including the product.

1.4 Instructions and Key Features

TESCOM Shield Box provides RF isolation and signal connections necessary for mobile testing. Shield Box makes an ideal solution for testing mobiles and large RF devices on the test benches of R&D, service, and QC. This low cost quality device is the results of many years of experience in RF test fixture design and will become another standard bench top device for every RF engineer.

- 1) High RF shielding
- 2) Easy Opening/Closing of Door
- 3) EMI filters on all Data and DC lines
- 4) Customizable Data and RF connections
- 5) Shock Absorber on lid

1.5 Specifications

Specifications are listed in Appendix A

1.6 Initial Inspection

This section provides the information for verifying proper shipment of the Shield Box.

Product Condition and Accessory Check

- 1) Upon receipt of the Shield Box, check for damage that could have occurred during shipment.
- 2) Verify you have received the accessories supplied with the Shield Box and Panel, which are listed in Appendix B.

To avoid hazardous electrical shock, do not perform electrical tests when there are signs of shipping damage to the equipment.

1.7 Shield Box Connectors

Shield Box Connectors

This section contains reference information for Shield Box connectors.

[Table 1] Shield Box Connectors

Connectors	Specification
N Coaxial Connector of the outside (Connected to SMA connector of the inside)	Impedance: 50 ohm Voltage Rating: 250 Vpeak Dielectric Withstanding Voltage: 750 Vrms
SMA Coaxial Connector	Impedance: 50 ohm Voltage Rating: 250 Vpeak Dielectric Withstanding Voltage: 750 Vrms
DB9 Data Connector	Working Voltage: 100 VDC Dielectric Withstanding Voltage: 300 VDC EMI Filter: 1000 pF Pi
DB25 Data Connector	Working Voltage: 100 VDC Dielectric Withstanding Voltage: 300 VDC EMI Filter: 1000 pF Pi
DB37 Data Connector	Working Voltage: 100 VDC Dielectric Withstanding Voltage: 300 VDC EMI Filter: 1000 pF Pi
USB2.0 Connector	Data Rate : 480 Mbps

1.8 Storage

The storage temperature range for this equipment is $-20\text{ }^{\circ}\text{C}$ to $70\text{ }^{\circ}\text{C}$. When this equipment is not used for a long period of time, cover with vinyl or place in a cardboard box and store in a dry place away from direct sunlight.

1.9 Optional I/O Panel and Accessories

Optional I/O Panel and Accessories are listed in Appendix C

1.10 Service and Support

If you have a problem with your TC-5970C, contact Tescom Technical Support specialists. Any adjustment or repair of this product must be performed by qualified personnel.

Chapter

2

Operation

This chapter introduces component identifications, operations, maintenance, and performance tests of a shield box.

2.1 Component Identification

TC-5910D Component Identification

[Figure 1] TC-5910D Component Identification

TC-5915A Component Identification

[Figure 2] TC-5915A Component Identification

TC-5916A Component Identification

[Figure 3] TC-5916A Component Identification

TC-5920A Component Identification

[Figure 4] TC-5920A Component Identification

TC-5922A Component Identification

[Figure 5] TC-5922A Component Identification

TC-5930A/AR Component Identification

[Figure 6] TC-5930A/AR Component Identification

Changing the opening direction of the door

- 1) Remove screws for door lock and holder on the side of a shield box
- 2) But, do not remove screws for a handle of a door
- 3) Rotate a door upside down.
- 4) Attach a door lock and tighten screws for it on another side of a shield box.
- 5) Attach a door and tighten screws for it on a shield box.

[Figure 7] Changing the opening direction of the door

TC-5972A/C Component Identification

[Figure 8] TC-5972A/C Component Identification

TC-5970B/C Component Identification

[Figure 9] TC-5970B/C Component Identification

2.2 Maintenance

Shield Box is designed and built for long life and easy maintenance.

Optimal RF shielding is obtained using a shield form gasket between the case and lid. It must be checked periodically for damage or excessive wear that would compromise the seal. Pressure on the gasket by the lid results in a proper RF seal.

Check List for Maintenance

- 1) Check for loose screws and tighten with proper tools, if necessary.
- 2) Check for a loose connection. If a loose connector is found, tighten the connector with proper tools.
- 3) Check for a damaged cable, especially near the connector-cable neck. Replace any damaged cables found.
- 4) Visually inspect the RF seal (gasket) between the bottom shield box case and lid for excessive wear.

The RF gasket is an important element of optimum shielding. It must be checked periodically for damage or wear out

[Figure 10] Shield Box(ex : TC-5970C)

WARNING

Do not clean this equipment with organic solvents such as benzene, toluene or acetone as they will damage the gasket parts.

2.3 Performance Test

TESCOM Shield Boxes are precision RF devices built very sturdy. Worn out shielding gaskets, as well as metal corrosion or oxidation at the lid contact, can significantly reduce the effectiveness of the Shield Box. This section describes the test procedure for the Shield Boxes shielding effectiveness.

You must performance test and verify shield box specifications every time maintenance is performed on a test cell such as replacing the gasket during routine maintenance. Also performance test the shield box if you suspect mechanical damage

Calibration Period: <6 months

Test Subject: Shielding Effectiveness

Required Equipment

- a. Spectrum Analyzer: 6 GHz
- b. Signal Generator: 6 GHz
- c. Dipole Antenna: TESCOM 900 MHz, 1.8 GHz, 2.4 GHz, 5.8 GHz

Test Connection

[Figure 11] Shielding Measurement Test Set Up (ex : TC-5970C)

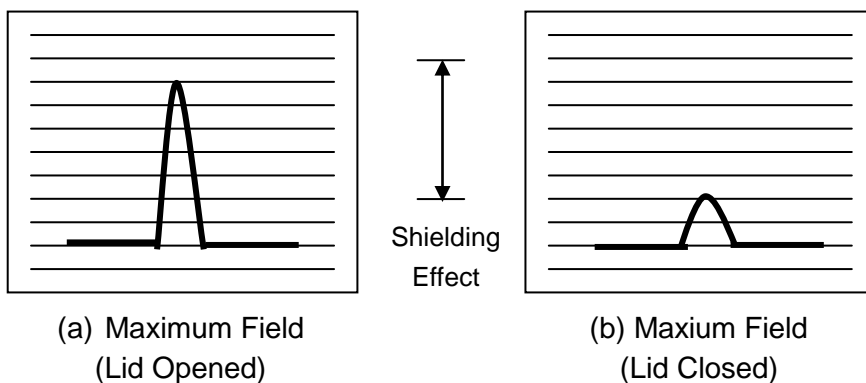

Before making a measurement, visually inspect the shielding gasket around the lid. Replace the gasket if there is any visible damage or excessive wear.

Specification

The Specification for each shield box varies on I/O interface panel. Therefore, please take a look Appendix A and C before order.

TEST Procedure

- 1) Connect the Signal Generator output to the RF connector of the Shield Box.
- 2) Connect the 900 MHz Dipole antenna to the SMA connector inside the Shield Box.
- 3) Set the Signal Generator CW 900 MHz, 10 dBm output.
- 4) Set the HP8562B Spectrum Analyzer as follows:
 - CF: 900 MHz
 - Span: 1 MHz
 - Resolution BW: 10 kHz
 - Scale 10 dB/div
- 5) Connect the 900 MHz Dipole to the Spectrum Analyzer with RF cable.
- 6) Open the lid of the Shield Box and move the antenna around the Shield Box to find the location where the maximum field is found. Fix the location of antenna for maximum field.
- 7) Adjust the spectrum analyzer input range and set the 900 MHz signal to the top display line.
- 8) Close the lid.
- 9) The shield effectiveness, which is measured when the lid opens or closed, should be within the specification in the Appendix A or C.
- 10) Change frequency to 1.8 GHz and repeat the test described above.
- 11) Change frequency to 2.4 GHz and repeat the test described above.
- 12) Change frequency to 5.8 GHz and repeat the test described above.
