

GDYD-M Manual AC/DC Hipot Test Set (Pointer Type)

Product Description

Our AC/DC hipot test set with manual control is portable design. It meets wide voltage range from 0-500kV. There are three types of testing transformer for boosting in measurement, oil, gas and dry testing transformer. It is also used for AC, DC, AC/DC hipot testing.

Features

- Monitoring high voltage side voltage, low voltage side current and indicating of zero position, power, operation, timing;
- Over-current protection, zero-starting protection, sound and light alarm;
- With new type time relay, time range is more wider (1S ~ 99H);
- Using the latest current relay, more accurate and reliable;
- Test transformer high voltage coil is made by high quality polyester varnished wire and high voltage insulation material;
- 5kVA and above Testing Transformer with movable iron wheel. Light weight, small size, easy to move, superior performance.
