

DLQD-CY1 Electro Pneumatic Process & Punch Trainer

■ Overview

- The Electro Pneumatic Process and Punch Trainer is composed of aluminum panel, distribution part, punching simulation, pneumatic circuit and PLC signal switching module.
- The device simulates industrial working condition to process and punching the materials and parts. Test cylinder's position through various sensors and then machine & punching the module.

■ Technical Parameter

- Total dimension: 250 X 600 X 400mm
- Input power: DC 24V
- Capacity: < 100VA
