| Point-of-Load Alliance compatible | $12=12 \mathrm{~V}$ | $05=6 \mathrm{~A}$ | Always 0 |
| Output Voltage Adjustment |  |  |  |
| The ultra-wide output voltage trim range offers major advantages to users who select the PTH12050. It is no longer necessary to purchase a variety of modules in order to cover different output voltages. The output voltage can be trimmed in a range of 1.2 Vdc to 5.5 Vdc for suffix ' W ' and 0.8 Vdc to 1.8 Vdc for suffix 'L'. When the PTH12050 converter leaves the factory the output has been adjusted to the default voltage of 1.2 V for the PTH12050W and 0.8 V for the PTH12050L. |  |  |  |

## Notes:

1. Remote ON/OFF. Positive Logic

ON: Pin 3 open; or $V>$ Vin -0.5 V
OFF: Pin 3 GND; or $\mathrm{V}<0.8 \mathrm{~V}$ (min - 0.2 V ).
2. See Figure 1 for safe operating curve.
3. A $100 \mu \mathrm{~F}$ electrolytic input capacitor is required for proper operation. The capacitor must be rated for a minimum of 750 mA rms of ripple current. $\mathrm{C} 2=10 \mu \mathrm{~F}$ ceramic capacitor, required for output voltages of 3.3 V and higher.
4. An external output capacitor is not required for basic operation. Adding $100 \mu \mathrm{~F}$ of distributed capacitance at the load will improve the transient response.
5. $1 \mathrm{~A} / \mu \mathrm{s}$ load step, 50 to $100 \%$ lomax, Cout $=100 \mu \mathrm{~F}$.
6. If utilized Vout will track applied voltage by $\pm 0.3 \mathrm{~V}$ (up to Vo set point).
7. Tape and reel packaging only available on the surface-mount versions.
8. The pk-pk output ripple voltage is measured with an external $10 \mu \mathrm{~F}$ ceramic capacitor. See Figure 3 for Standard application schematic.

A. SOA curves represent the conditions at which internal components are within the Artesyn derating guidelines.
B. Characteristic data has been developed from actual products tested at $25^{\circ} \mathrm{C}$. This data is considered typical data for the converter.
