

SLG-1000 Standard luminance generator

SLG-1000 is a standard light source that provides uniform and stable luminance (radiance). It has the advantages of good luminance uniformity, large luminance range, high stability, easy use, adjustable output current and etc.

Luminance range: 0-1000cd/m² adjustable (continuous adjustable, special customizable)

CCT: 2856K \pm 25K (CCT can be customized according to needs).

Luminance stability: \pm 0.5%

Luminance inhomogeneity: <1.5% (excluding edges)

Output port: \varnothing 200mm

It is mainly used for calibration and verification of luminance meter, telescope, image sensor, photometer, radiometer, electronic image and etc.
