

## Aatcc Crease-Recovery Tester HTF-016

### Detailed Description

Used for testing the crease-recovery performance of cotton, wool, linen, silk, chemical, fabrics or mixed textiles.

It's used to test the sample crease recovery ability to horizontal crease. Especially suitable for easy creasing fabric, fiber and other textile. It's necessary to test crease recovery ability, a large number of wrinkle recovery angle can determine fabric crease recovery ability.

Note: Put a piece of paper between the sample angle to avoid sample stick together when it's under loading. After loading, remove the paper, test the angle after the sample recovering in a certain time. Combine clever ruler and straightedge to measure the angle, avoid error due to vision.

### Specifications:

Weight: 10N

Dial: 180°

Dimension: 150x150x330mm

Standard: AATCC 66

Accessories: weights 2 pcs, pressurizing holder
