

MK-BL2000A

PALLET STRETCH WRAPPING MACHINE

DETAILS

The BL series Pallet Stretch Wrapping machines are built to wrap stretch film around a loaded pallet. The film will provide it with extra support and damage protection whilst your products are being moved or stored. This machine will provide your production line with added reliability, efficiency and quality.

Features:

- The lapping type and time can be designed based on the customers' requirements.
- The machine comes with a Photoelectric Detector which then automatically tests the products height, whilst controlling the travel limit.
- The rotary table will reset itself automatically, which makes sure that the in and out position of the tray is correct.
- This machine adopts a frequency converter which is used a programmable control.

Product Specifications:

Model	MK-BL2000A
Power supply	1phase 220V/50Hz or 3phase 380V/50Hz 1.25KW
Turn-table Diameter	φ1500mm(φ1650mm&φ2000mm are option)
Turn-table thickness	85mm
Speed of turn-table	0-12r/min
Turn-table loading	220kgs
Percent of Pre-stretch	250 %
Machine color	Blue
