

MK-BL2000B

PALLET STRETCH WRAPPING MACHINE

DETAILS

This Stretch Wrapping machine is a top press model with a top press type. The BL-2000B is perfect for wrapping lighter boxes or materials as the top press function will hold the product in place whilst in operation and prevent it from being knocked down, whilst the machine wraps the film around it. This model will be available for viewing at the PPMA show in Birmingham at the end of September where we will demonstrate to you how the product works in more detail.

Features:

- A Top Press model that is suitable for lighter packaging
- Adopts a Programmable control
- The lapping type and time can be customised based on customers' requirements
- Equipped with a Photoelectric Detector, automatically testing the products/boxes height
- The rotary table can be reset automatically
- Convenient in film roll replacement.
- A Custom-made specification is available
