SQ-60 Manual Metallographic Sample Cutting Machine

Product description:

Application: Model SQ-60 Metallographic specimen cutting machine can be used to cut various metal and non-metal materials so as to get specimen and observe the metallographic or lithofacies structure.

Share With:

Application:

Model SQ-60 Metallographic specimen cutting machine can be used to cut various metal and non-metal materials so as to get specimen and observe the metallographic or lithofacies structure. It has cooling system so as to clear up the heat produced during cutting and avoid to burn the metallographic or lithofacies structure of specimen because of superheat. This machine features easy operation and reliable safety. It is the necessary specimen preparing instrument for using in factories, scientific research institutes and laboratories of colleges.

Main specifications:

Model	SQ-60
Max Cutting Capacity	φ60mm
Cooling method	T-slot worktable, dual drive vises Outside cooling system
Cutting wheels size	250x2.5x32mm
Power	2.2kw
Spindle Speed	2800rpm
power supply	380V,50Hz
Dimension	230X240mm
Weight	75KG
