

# APS5000A Tri-phase High Power Programmable AC Power Source

- Advanced direct digital frequency synthesizer(DDS) waveform generation technology, high frequency stability, good continuity
- Measurement precision is high, suitable for current half-sinusoid and its similar waveforms with DC component measurement
- Provide embedded intelligent PC monitoring system
- Adjustable output voltage from 0 to 150V, 0 to 300V, step distance 0.1V
- Output frequency 45-120Hz(40-500Hz optional), step distance 0.1 Hz
- Output current limiting function
- With 9 sets of memory, you can store commonly used parameters for easy invocation when using them
- With RS232C communication interface [IEEE488.0(GPIB)optional] , instruction execution times is less than 10mS
- Protection mode: over voltage, over current, overload, short circuit, current limit, etc
- Provide RMS voltage, RMS current, active power, frequency, power factor, etc
- For 100% load removal, voltage stabilizing reaction time within 20ms, strong overload capacity, instantaneous
- Current can withstand 3 times of rated current
- Voltage, frequency, time, digital key input, high precision
- The machine can set 30 sets of different voltage, frequency, rising time and running time at one time, and can test continuously for 999999 times.
